getpwuid :1, // - get passwd record given user IDÐ
getservbyname :1, // - get services record given its nameÐ
getservbyport :1, // - get services record given numeric portÐ
getservent :1, // - get next services recordÐ
getsockname :1, // - retrieve the sockaddr for a given socketÐ

getsockopt :1, // - get socket options on a given
socketÐ given :1, //Ð
glob :1, // - expand filenames
using wildcardsÐ gmtime :1, // -
convert UNIX time into record or string using Greenwich timeÐ
'goto' :1, // - create spaghetti codeÐ
grep :1, // - locate elements
in a list test true against a given criterionÐ
hex :1, // - convert a string to a
hexadecimal numberÐ 'import' :1, //
- patch a module's namespace into your ownÐ
index :1, // - find a substring within a stringÐ
'int' :1, // - get the integer
portion of a numberÐ ioctl :1, //
- system-dependent device control system callÐ
'join' :1, // - join a list into a string using
a separatorÐ keys :1, // -
retrieve list of indices from a hashÐ
kill :1, // - send a signal to a process or
process groupÐ last :1, // -
exit a block prematurelyÐ
lc :1, // - return lower-case version of a
stringÐ lcfirst :1, // - return a
string with just the next letter in lower caseÐ
length :1, // - return the number of bytes in a
stringÐ 'link' :1, // - create a
hard link in the filesytemÐ
listen :1, // - register your socket as a serverÐ
local : 2, // - create a
temporary value for a global variable (dynamic scoping)Ð
localtime :1, // - convert UNIX time into record or
string using local timeÐ
lock :1, // - get a thread lock on a variable,
subroutine, or methodÐ
'log' :1, // - retrieve the natural logarithm
for a numberÐ lstat :1, // - stat
a symbolic linkÐ m :null, // -
match a string with a regular expression patternÐ
map :1, // - apply a change to a list to get
back a new list with the changesÐ
mkdir :1, // - create a directoryÐ
msgctl :1, // - SysV IPC message
control operationsÐ msgget :1, //
- get SysV IPC message queueÐ
msgrcv :1, // - receive a SysV IPC message from
a message queueÐ msgsnd :1, // -
send a SysV IPC message to a message queueÐ
my : 2, // - declare and assign a local
variable (lexical scoping)Ð
'new' :1, //Ð
next :1, // - iterate a block prematurelyÐ
no :1, // - unimport some
module symbols or semantics at compile timeÐ
oct :1, // - convert a string to an octal
numberÐ open :1, // - open a
file, pipe, or descriptorÐ
opendir :1, // - open a directoryÐ
ord :1, // - find a character's numeric
representationÐ

```
                                our                                 : 2,    // -
declare and assign a package variable (lexical scoping)Ð
pack                            :1,     // - convert a list into a binary
representationÐ                 'package'                           :1,     // -
declare a separate global namespaceÐ
pipe                            :1,     // - open a pair of connected
filehandlesÐ                pop                                 :1,     // -
remove the last element from an array and return itÐ
pos                             :1,     // - find or set the offset for the
last/next m//g searchÐ
print                           :1,     // - output a list to a filehandleÐ
                printf                          :1,     // - output a
formatted list to a filehandleÐ
prototype                       :1,     // - get the prototype (if any) of a
subroutineÐ                push                                :1,     // - append
one or more elements to an arrayÐ
q                               :null,  // - singly quote a stringÐ

semaphoresÐ                semop                           :1,     // - SysV
semaphore operationsÐ
```

send :1, // - send a message over a socketÐ
setgrent :1, // - prepare group
file for useÐ sethostent :1, // -
prepare hosts file for useÐ
setnetent :1, // - prepare networks file for useÐ
setpgrp :1, // - set the process
group of a processÐ setpriority :1, //
- set a process's nice valueÐ
setprotoent :1, // - prepare protocols file for useÐ
setpwent :1, // - prepare passwd
file for useÐ setservent :1, // -
prepare services file for useÐ
setsockopt :1, // - set some socket optionsÐ
shift :1, // - remove the first
element of an array, and return itÐ
shmctl :1, // - SysV shared memory operationsÐ
shmget :1, // - get SysV shared
memory segment identifierÐ
shmread :1, // - read SysV shared memoryÐ
shmwrite :1, // - write SysV
shared memoryÐ shutdown :1, // -
close down just half of a socket connectionÐ
'sin' :1, // - return the sine of a numberÐ
sleep :1, // - block for some
number of secondsÐ socket :1, // -
create a socketÐ socketpair :1, // -
create a pair of socketsÐ
'sort' :1, // - sort a list of valuesÐ
splice :1, // - add or remove
elements anywhere in an arrayÐ
'split' :1, // - split up a string using a regexp
delimiterÐ sprintf :1, // -
formatted print into a stringÐ
'sqrt' :1, // - square root functionÐ
srand :1, // - seed the random
number generatorÐ stat :1, // -
get a file's status informationÐ
state :1, // - declare and assign a state
variable (persistent lexical scoping)Ð
study :1, // - optimize input data for repeated
searchesÐ 'sub' :1, // - declare
a subroutine, possibly anonymouslyÐ
'substr' :1, // - get or alter a portion of a
stirngÐ symlink :1, // - create a
symbolic link to a fileÐ
syscall :1, // - execute an arbitrary system callÐ
sysopen :1, // - open a file,
pipe, or descriptorÐ sysread :1, //
- fixed-length unbuffered input from a filehandleÐ
sysseek :1, // - position I/O pointer on handle
used with sysread and syswriteÐ
system :1, // - run a separate programÐ
syswrite :1, // - fixed-length
unbuffered output to a filehandleÐ
tell :1, // - get current seekpointer on a
filehandleÐ telldir :1, // - get
current seekpointer on a directory handleÐ
tie :1, // - bind a variable to an object
classÐ

```
                    tied                            :1,     // - get a
reference to the object underlying a tied variableÐ
time                            :1,     // - return number of seconds since
1970Ð               times                           :1,     // - return
elapsed time for self and child processesÐ
tr                              :null,  // - transliterate a stringÐ
               truncate                        :1,     // - shorten a fileÐ
               uc                              :1,     // - return upper-
case version of a stringÐ
ucfirst                         :1,     // - return a string with just the
next letter in upper caseÐ
umask                           :1,     // - set file creation mode maskÐ
               undef                           :1,     // - remove a
variable or function definitionÐ
unlink                          :1,     // - remove one link to a fileÐ

Both modes are achieved through adding of more data pointsÐ => 1) with large data sets you may get troubleÐ=> 2) if you want to display the points too, you have to plot them as 2nd data series over the linesÐ&& 3) consecutive x data points are not allowed to have the same valueÐThis is version 0.5 of curvedLines so it will probably not work in every case. However Ð the basic form of use descirbed next works (:ÐFeel free to further improve the codeÐ_____Ðhow to use it:Ð _____Ðvar d1 = [[5,5],[7,3], [9,12]];Ðvar options = { series: { curvedLines: { active: true }}};Ð $.plot($("#placeholder"), [{data = d1, lines: { show: true}, curvedLines: {apply: true}}], options);Ð _____Ðoptions:Ð _____Ðactive: bool true => plugin can be usedÐapply: bool true => series will be drawn as curved lineÐfit: bool true => forces the max,mins of the curve to be on the datapointsÐcurvePointFactor int defines how many "virtual" points are used per "real" data point toÐemulate the curvedLines (points total = real points * curvePointFactor)ÐfitPointDist: int defines the x axis distance of the additional two points that are usedÐto enforce the min max condition.Ð+ line options (since v0.5 curved lines use flots line implementation for drawingÐ=> line options like fill, show ... are supported out of the box)Ð*/Ð*Ð* v0.1 initial commitÐ* v0.15 negative values should work now (outcommented a negative -> 0 hook hope it does no harm)Ð* v0.2 added fill option (thanks to monemihir) and multi axis support (thanks to soewono effendi)Ð* v0.3 improved saddle handling and added basic handling of DatesÐ* v0.4 rewritten fill option (thomas ritou) mostly from original flot code (now fill between points rather than to graph bottom), corrected fill Opacity bugÐ* v0.5 rewritten instead of implementing a own draw function CurvedLines is now based on the processDatapoints flot hook (credits go to thomas ritou).Ð* ™ This change breakes existing code however CurvedLines are now just many tiny straight lines to flot and therefore all flot lines options (like gradient fill,Ð* ’ 6† F÷r’ &R æ÷r 7W ÷'FVB ÷WB öb F†R &÷•* v0.6 flot 0.8 compatibility and some bug fixesÐ*/Ðfunction($) {Ð var options = {Ð series : {Ð curvedLines : {Ð active : false,Ð apply: false,Ð fit : false,Ð curvePointFactor : 20,Ð fitPointDist : undefinedÐ }Ð }Ð

/* Flot plugin for rendering pie charts.Ðopyright (c) 2007-2014 IOLA and Ole Laursen.Ðicensed under the MIT license.Ðhe plugin assumes that each series has a single data value, and that eachÐalue is a positive integer or zero. Negative numbers don't make sense for aÐie chart, and have unpredictable results. The values do NOT need to beÐassed in as percentages; the plugin will calculate the total and per-sliceÐercentages internally.Ð Created by Brian MedendorpÐ Updated with contributions from btburnett3, Anthony Aragues and Xavi IvarsÐhe plugin supports these options:Ð6W&-W3¢ ™pie: ™Ð6†÷s¢ G'VRð falseÐ—& F—W3¢ Ó f÷" W&6VçF vR öb gVÆÇ6—¦RÂ ÷"   7 V6-f-VB —†VÂ ÆVæwF,Â ÷" 'auto'Ð--ææW%& F—W3¢ Ó f÷" W&6VçF vR öb gVÆÇ6—¦R ÷"   7 V6-f-VB —†VÂ length, for creating a donut effectÐ—7F 'D ævÆS¢ Ó" f 7F÷" öb ' W6VB f÷" starting angle (in radians) i.e 3/2 starts at the top, 0 and 2 have the resultÐ—F-ÇC¢ Ó f÷" W&6VçF vR Fò F-ÇB F†R -RÂ v†W&R —2 æò F-ÇBÂ æB —2 completely flat (nothing will show)Ð-öfg6WC¢™ ™top: integer value to move the pie up or downÐ™left: integer value to move the pie left or right, or 'autoÐ™ stroke: {Ð™color: any hexidecimal color value (other formats may or may not work, so best to stick with something like '#FFF')Ð™width: integer pixel width of the strokeÐ—Ó†Æ &VÃ¢™ ™show: true/false, or 'autoÐ™formatter: a user-defined function that modifies the text/style of the label textÐ™radius: 0-1 for percentage of fullsize, or a specified pixel lengthÐ™background:™ ™Ð6öÆ÷#¢ ç' hexidecimal color value (other formats may or may not work, so best to stick with something like '#000')Ð™-÷ 6—G"¢ ™Ó},Ðhreshold: 0-1 for the percentage value at which to hide labels (if they're too small)Ð™Ó†6öÖ&-æS¢™ ™threshold: 0-1 for the percentage value at which to combine slices (if they're too small)Ð™ color: any hexidecimal color value (other formats may or may not work, so best to stick with something like '#CCC'), if null, the plugin will automatically use the color of the first slice to be combinedÐ™label: any text value of what the combined slice should be labeledÐ™Ý†-v†Æ-v‡C¢™ ™opacity: 0-1Ð More detail and specific examples can be found in the included HTML file.Ð/Ð (function($) {ÐÒòò Ö †-×VÒ &VG& r GFV× G2 v†Vâ f—GF-ær Æ &VÇ2 v—F†-â F†R Æ÷Ð var REDRAW_ATTEMPTS = 10;ÐÒòò f 7F÷" '' v†-6, Fò 6‡&-æ² F†R -R v†Vâ f—GF-ær labels within the plotÐf " TE uõ4…$"ä² Ò ã"SÐgVæ7F-öâ -æ—B‡ Æ÷B' Ðvar canvas = null,Ð™—F &vWB Ò çVÆÂÍ÷ F-öç2 Ò çVÆÂÍÖ …& F—W2 Ò çVÆÂÍ6VçFW$ÆVgB Ò çVÆÂÍ centerTop = null,Ð™— &ö6W76VB Ò f Ç6RÍ7G, Ò çVÆÐ½/ interactive variableÐÐvar highlights = [];Ð™// add hook to determine if pie plugin in enabled, and then perform necessary operationsÐplot.hooks.processOptions.push(function(plot, options) {Ð™--b †÷ F-öç2ç6W&-W2ç -Rç6†÷r'Ð™options.grid.show = falseÐ™Ð/ set labels.showÐ™if (options.series.pie.label.show == "auto")™{Ð-b (options.legend.show) {Ð™™options.series.pie.label.show = false;Ð™ VÇ6R™ ™ options.series.pie.label.show = true;Ð™ Ð}ÐÐ/ set radiusÐif (options.series.pie.radius == "auto") {Ð™--b †÷ F-öç2ç6W&-W2ç -RæÆ &VÂç6†÷r™™™ options.series.pie.radius = 3/4;Ð™—Ò VÇ6R™ ™options.series.pie.radius = 1;ÐÐ/ ensure sane tiltÐ™if (options.series.pie.tilt > 1)™{Ð÷ F-öç2ç6W&-W2ç -RçF-ÇB Ò ½ ™™} else if (options.series.pie.tilt < 0)™{Ð÷ F-öç2ç6W&-W2ç -RçF-ÇB Ò™™™ ½Ð)™ÐÐ plot.hooks.bindEvents.push(function(plot, eventHolder) {Ð—f " ÷ F-öç2 Ò plot.getOptions();Ð--b †÷ F-öç2ç6W&-W2ç -Rç6†÷r'™ ™if (options.grid.hoverable)™{Ð eventHolder.unbind("mousemove").mousemove(onMouseMove);Ð™™™Ðif (options.grid.clickable) {Ð™-WfVçD†öÆFW"çVæ&-æB,&6Æ-6²"'æ6Æ-6²†öä6Æ-6™™™ ½Ð)™ÐÐ plot.hooks.processDatapoints.push(function(plot, series, data, datapoints) {Ð• var options = plot.getOptions();Ð--b †÷ F-öç2ç6W&-W2ç -Rç6†÷r'™ ™ processDatapoints(plot, series, data, datapoints);Ð™Ý)™ÐÐ plot.hooks.drawOverlay.push(function(plot, octx) {Ð—f " ÷ F-öç2 Ò plot.getOptions();Ð--b †÷ F-öç2ç6W&-W2ç -Rç6†÷r'™ ™drawOverlay(plot, octx);Ð™Ý)™ÐÐ plot.hooks.draw.push(function(plot, newCtx) {Ð—f " ÷ F-öç2 Ò Æ÷BævWD÷ F-öç2,™ ½ if (options.series.pie.show) {Ð™draw(plot, newCtx);Ð™Ý)™ÐÐunction processDatapoints(plot, series, datapoints) {Ð--b , &ö6W76VB™ {Ðprocessed = true;Ð canvas = plot.getCanvas();Ð™target = $(canvas).parent();Ð™options = plot.getOptions();Ð™plot.setData(combine(plot.getData()));Ð™Ý)™ÐÐunction combine(data) {Ð

Version 1.7.1Ð*Ð* ** means there is basic unit tests for this parameter.Ð*Ð*
@name  JeditableÐ* @type  jQueryÐ* @param String  target             (POST)
URL or function to send edited content to **Ð* @param Hash
options            additional optionsÐ* @param String  options[method]
method to use to send edited content (POST or PUT) **Ð* @param Function
options[callback] Function to run after submitting edited content **Ð* @param
String  options[name]      POST parameter name of edited contentÐ* @param
String  options[id]        POST parameter name of edited div idÐ* @param
Hash    options[submitdata] Extra parameters to send when submitting edited
content.Ð* @param String  options[type]      text, textarea or select (or any
3rd party input type) **Ð* @param Integer options[rows]      number of rows
if using textarea **Ð* @param Integer options[cols]      number of columns if
using textarea **Ð* @param Mixed   options[height]    'auto', 'none' or
height in pixels **Ð* @param Mixed   options[width]     'auto', 'none' or
width in pixels **Ð* @param String  options[loadurl]   URL to fetch input
content before editing **Ð* @param String  options[loadtype]  Request type
for load url. Should be GET or POST.Ð* @param String  options[loadtext]  Text
to display while loading external content.Ð* @param Mixed
options[loaddata]  Extra parameters to pass when fetching content before
editing.Ð* @param Mixed   options[data]      Or content given as paramameter.
String or function.**Ð* @param String  options[indicator] indicator html to
show when savingÐ* @param String  options[tooltip]   optional tooltip text
via title attribute **Ð* @param String  options[event]     jQuery event such
as 'click' of 'dblclick' **Ð* @param String  options[submit]    submit button
value, empty means no button **Ð* @param String  options[cancel]    cancel
button value, empty means no button **Ð* @param String  options[cssclass]
CSS class to apply to input form. 'inherit' to copy from parent. **Ð* @param
String  options[style]     Style to apply to input form 'inherit' to copy
from parent. **Ð* @param String  options[select]    true or false, when true
text is highlighted ??Ð* @param String  options[placeholder] Placeholder text
or html to insert when element is empty. **Ð* @param String
options[onblur]    'cancel', 'submit', 'ignore' or function ??Ð*Ð* @param
Function options[onsubmit] function(settings, original) { ... } called before
submitÐ* @param Function options[onreset]  function(settings, original)
{ ... } called before resetÐ* @param Function options[onerror]
function(settings, original, xhr) { ... } called on errorÐ*Ð* @param Hash
options[ajaxoptions]  jQuery Ajax options. See docs.jquery.com.Ð*Ð*/Ð
